

PM Role in an AI World: the session at a glance

120 minutes, the same in every region. One outcome: an agent every room tries the week after.

1 Introduction

10 min • plenary • moderator

- Why the PM role is changing
- Goal: define your work around AI
- Everyone already knows their room

2 AI use cases

2 x 15 min • plenary • 2 speakers

- Two real AI use cases
- What it took and what it gave back
- Sets the bar for the pilots

3 Breakout • Pain to Pilot

60 min • rooms C1-C6 • group lead + team

Orient 5'	Map the hours 10'	Design 12'
Build & challenge 15'	Fix & decide 8'	Commit 10'

- One case, one agent, one pilot per room
- Agent takes routine, PM keeps judgment
- Output: Pilot Pack + 90-second summary

4 Wrap-up

20 min • plenary • debrief host

- Summit Debrief: 90 s per room
- What each room tries next week
- Feedback coordinators named

BEFORE • BY TUE 3 NOV

- Rooms allocated in the invitation (29 Oct)
- Pre-work: story, case file, own week
- Group lead per room with Agent Builder

SITE OWNERS • ON THE DAY

- A space per room near the plenary
- Laptop, screen, network, tool access
- Case, sample data and Pilot Pack

AFTER THE SUMMIT

- Each room tries its agent the next week
- Feedback coordinators collect results
- 30-day readout in early December

How the breakout unfolds

Six steps per room. Every Pilot Pack records results, unfinished work and next steps.

MINUTES	STEP	WHAT THE ROOM DOES	CHECKPOINT • WHAT MUST EXIST
00-05'	1 Orient	The group lead reads the case aloud, assigns roles and opens Agent Builder.	Roles assigned. Agent Builder ready to use
05-15'	2 Map the hours	Estimate time per task. Pick repetitive work the agent can help with and a use for the time saved.	Current hours per PM per week and expected benefit
15-27'	3 Design the agent	Write instructions and what the PM still decides. Define a key failure and what counts as passing each test.	Three tests: quality, time saved, PM approval rules
27-42'	4 Build & challenge	The group lead builds the agent and runs three tests. Other members check results and suggest modifications.	Results and task time, including PM review, recorded
42-50'	5 Fix & decide	Fix and rerun failed tests. Agree what the agent must check with the PM before acting.	Instructions updated. Tests passed or fixes still needed.
50-60'	6 Package & commit	Choose a feedback coordinator and a task for everyone next week, once tests pass and access is ready.	Coordinator on card. Pack submitted. 90-second summary practised.
AFTER	Summit Debrief <i>opens the wrap-up</i>	Return for the proposed wrap-up. Each room shares a 90-second summary.	What you'll try next week, time you could save and what to fix

WHO IS IN EVERY ROOM

- Max. 8 people, mixed experience
- Group lead: facilitates and builds
- Team: checks and records results

WHAT EVERY ROOM NEEDS

- A space near the whole-group session
- Laptop, screen, network and tool access
- Case, sample data and Pilot Pack

IF SOMETHING GOES WRONG

- Running late? Keep checks and next steps.
- Group lead absent? Choose a replacement.

Frequently asked questions

Left: before the summit. Right: on the day and after.

1 How are people assigned to rooms?

Upfront, by the regional lead, final on 26 Oct. The invitation (29 Oct) names each person's room and case file, C1–C6.

2 What must participants do before 5 November?

Read the story and their case file, map their own week, bring one idea. Done by Tue 3 Nov; nothing to prepare on the day.

3 Do participants need AI experience?

No. The group lead builds the agent with Agent Builder in Copilot Premium. The team checks results and brings experience.

4 What if a group lead doesn't have Agent Builder yet?

Request it at forms.cloud.microsoft/e/KifvXMztWp and confirm access by 3 Nov. It must be ready to use when the room starts.

5 Who runs each room?

A group lead named by the regional lead, who facilitates and builds the agent (briefing 23 Oct). The team checks and records results.

6 Which cases does my region run?

Every region runs C3 and C6, then adds C1, C4, C2, C5 in that order. Regions with six or more rooms run all six.

7 How many people per room?

At most 8, with mixed experience. Larger groups split into two rooms on the same case.

8 What does the site provide?

Per room: a space near the plenary, a laptop, screen, network and tool access, and the case, sample data and Pilot Pack.

9 Which data do rooms use?

Only the KESTREL case files, which hold no real project data. No customer or confidential data goes into any AI tool.

10 What if a room runs late, or the group lead is absent?

Running late: keep the checks and next steps, cut the rest. Group lead absent: the room chooses a replacement.

11 What does each room deliver?

A Pilot Pack with results, unfinished work and next steps, and a 90-second summary for the Summit Debrief.

12 What happens after the summit?

Everyone tries the agent the next week, once tests pass and access is ready. The feedback coordinator collects the results.
